

SEVIER

SOLID 

WASTE

composting facility

At Sevier Solid Waste
we collect trash and
turn it into compost.

Compost is made from waste such as food scraps, paper, and leaves.

Help the
bacteria
find the
apple
core!

We couldn't do this without
the help of bacteria.

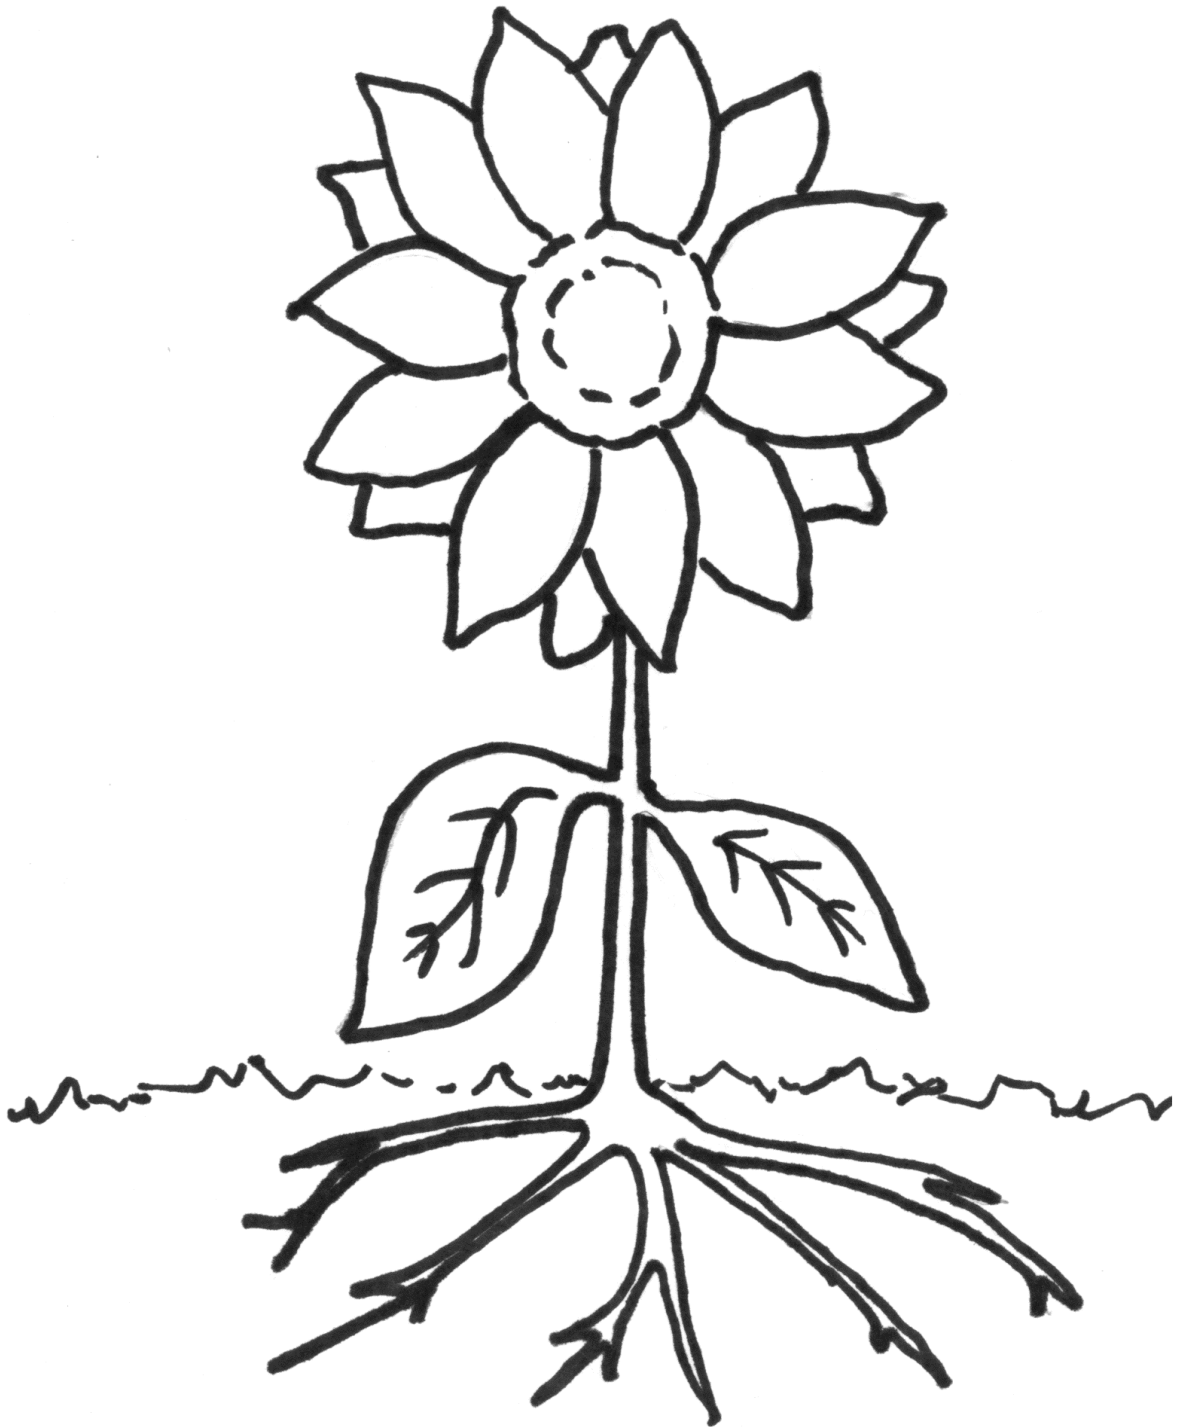

Bacteria are microscopic
organisms that break down
organic matter.

Not everything can be composted, some items need to be recycled.

Match the items to the correct bin!

Our compost has a lot of nutrients that help plants grow.

What will you plant
in the compost?
